

Green Earth Project

Green Earth project is a recycling program that is aimed to protect the environment. Recycling is simply taking a product or material at the end of its useful life, and turning it into a usable raw material to create another product. There are numerous benefits of recycling such as reducing greenhouse gas emissions, saving energy, reducing air and water pollution, preserving our resources as well as protecting wildlife. Recycling is easy and a very good way to promote environmental awareness.

e.g. used light bulbs/lamps > recycled to new light bulbs/lamps
used beverage cartons > recycled to roof sheets or makeshift boats
(useful during floods)

Total collection for the this year:

Used light bulbs/lamps	3456
Used batteries	1103
Used beverage cartons	200,382 converted to roofsheets (÷ 2000) = 100
	house (÷ 35) = 3

Overall, it is evident that through this established recycling effort, we can all take part in many activities that can make our environment a healthier one. The Lionheart Society believes that our world would surely be a much better place if we all chose to recycle.
